

BIS Graduation Project Guidelines

The graduation project should adhere as much as possible to the following template and format:

Structure

Title Page
Dedication(optional)
Acknowledgments
Declaration
Abstract
Table of Contents
List of Tables
List of Figures
List of Acronyms/Abbreviations
Main Body
References
Appendices (as needed)

Guidelines

GENERAL Guidelines

1. The graduation project report must be written in English. Maintain consistency in spelling conventions (American or British English).
2. Page layout: Portrait orientation for text; landscape permitted only for wide tables/figures.
3. Paper size: A4 (210 mm × 297 mm), 80g weight.

Font specifications:

- a. Headings: Times New Roman, size sixteen, bold
 - b. Subheadings: Times New Roman, size fourteen, bold
 - c. Body text: Times New Roman, size twelve
 - d. Footnotes/table/figure captions: Times New Roman, size ten
6. Line spacing: 1.5 for body text; single-spaced for tables/figures.
 7. Page numbering: Consecutive numbering (bottom center), starting from the Table of Contents.

Table of Contents should contain list of tables, list of figures, list of acronyms, abstract, acknowledgment, chapter number and title, headings, and subheadings with page numbers.

Watch these videos to prepare for the table of contents:

1. <https://www.youtube.com/watch?v=eZLR6ovW6EM>
2. <https://www.youtube.com/watch?v=Gtw4Xd0i8el>
3. <https://www.youtube.com/watch?v=Se98M9IBxoU>

DEDICATION

(Optional)

You may dedicate your work to a member of your family.

ACKNOWLEDGMENT

(Optional)

Use this section to acknowledge the contribution of different people to your work; these may include your supervisor(s), sponsors, specific faculty members in your department, and even your family.

DECLARATION

I / we hereby certify that this material is entirely my own work, that I have exercised reasonable care to ensure that the work is original and does not to the best of my knowledge breach any law of copyright and has not been taken from the work of others save and to the extent that such work has been cited and acknowledged within the text of my work.

LIST OF ACRONYMS/ABBREVIATIONS

ACRONYM	Definition of Acronym

Chapter One

1 INTRODUCTION

1.1 Introduction (Aim of The Chapter)

1.2 Project Idea and scope

1.3 Business Problem

1.4 Project Objectives

**1.5 Related Works (analysis of previous works
+ determination of the existing gap)**

1.6 Project Contribution

1.7 System Features

1.8 System Requirements

1.9 System Users

1.10 System Tools and language

1.11 Project Time Plan

1.1 Introduction (Aim of The Chapter)

This section provides an overview of the purpose and content of the chapter. It briefly explains what topics will be discussed and how they contribute to the overall understanding of the project. The aim of this section is to guide the reader and give a clear idea about the structure of the chapter and its relevance to the graduation project.

1.2 Project Idea and scope

This section explains the main concept of the project and defines the boundaries within which the project will operate. It introduces the general idea behind the system or platform being developed and clarifies what the project will cover and what it will not include. The scope helps limit the project to achievable goals and prevents unnecessary expansion.

1.3 Business Problem

This section describes the real-world problem or challenge that the project aims to solve. It explains the current situation, the limitations of existing solutions (if any), and why the problem needs to be addressed. The purpose of this section is to justify the importance of the project and demonstrate its value.

1.4 Project Objectives

This section outlines the main goals that the project aims to achieve. The objectives define what the system should accomplish and provide clear direction for the project development. These objectives should be specific, measurable, and aligned with solving the identified business problem.

1.5 Related Works (analysis of previous works

+ determination of the existing gap)

This section reviews previous studies, systems, or projects related to the proposed project. It analyzes existing solutions to understand their approaches, strengths, and limitations. The purpose is to identify the research or practical gap that the current project aims to address and to justify the need for developing the proposed system.

1.6 Project Contribution

This section explains the unique value that the project adds compared to existing solutions. It highlights the innovations, improvements, or benefits that the proposed system provides.

1.7 System Features

This section describes the key functionalities and capabilities of the system. It provides a general overview of the main features that users will be able to access and use.

1.8 System Requirements

This section outlines the requirements necessary for the system to operate successfully. It includes both functional and non-functional requirements that define how the system should work and the conditions it must satisfy.

1.9 System Users

This section identifies the different types of users who will interact with the system and explains their roles. Each user category may have different permissions and responsibilities within the system.

1.10 System Tools and language

This section describes the technologies used to develop the system. It includes the programming languages, development tools, frameworks, databases, and platforms used during implementation.

1.11 Project Time Plan

This section presents the schedule for completing the project tasks. It outlines the different phases of the project and the estimated time required for each phase, ensuring that the project progresses in an organized and timely manner.

Chapter Two

2 BUSINESS PLAN

2.1 Executive Summary.

2.2 Vision & Mission.

2.3 Business Idea & Market (include SWOT analysis).

2.4 Marketing Plan.

2.5 Legal Form.

2.6 Start-up Capital & Sources of Start-up Capital.

2.7 Financial Plan.

2.1 Executive Summary

Name of business. Legal

form.

Contact address.

Tel.

E-mail:

Type of business.

Brief description of the business idea. Products or
services.

Customers. Owner(s).

Number of jobs to be created. Start-
up capital:

Investment Working capital

Total

Source of capital: Own

savings Partner

Family loan Bank loan

2.2 Vision

What are our hopes and dreams? What

problem are we solving?

Who and what are we inspiring to change?

Mission

What do we do? Whom do we

serve?

How do we serve them?

2.3 Business Idea and

Market Description of the business idea:

(e.g. identified needs, who are the customers, type of products or services to satisfy the needs, how to reach the customers, etc.)

Description of the market:

(e.g. geographical area, town, type of customers, size of total market, description of competitors, market share for the new business, etc.)

SWOT analysis

Strengths, weaknesses, opportunities, and threats related to business competition or project planning.

Customer Segmentation

Dividing customers into groups based on common characteristics so companies can market to each group effectively and appropriately.

2.4 Marketing Plan (4 Ps)

Product

Detailed description of the product or product range or service. Denomination.

Specification (e.g. size, color, quality).

Packaging.

After sales service.

Price

How much are customers willing to pay? Highest, Average; Lowest

Competitors' price. Highest ; Average; Lowest My price.

Highest ; Average; Lowest Reasons for setting my price Margin for discount?

Place

Location of the business.

Description of the planned location for the business. Reason for choosing this location.

Reaching the customers by selling to: Individuals - Retailers - Wholesalers -

Others Reason for choosing this way of distribution.

Promotion

Start-up promotion.

Description of the planned actions to inform customers about the opening of the new business (e.g. printed information, brochures, posters, newspaper articles, radio advertisements, opening ceremony, etc. Also make inquiries about the costs for the different types of promotion)

2.5 Legal Form

The legal form of the business will be: Reason for choosing this legal form

2.6 Start-up Capital

Estimation of start-up capital Amount INVESTMENT:

Equipment Miscellaneous

Total Investment

WORKING CAPITAL:

_____months of staff costs

_____months of operational costs Total

working capital

TOTAL START-UP CAPITAL

Sources of Start-up Capital

Sources of funding:

1-Equity capital: Own savings Partner

2-Loan 1:

Family

Friends

Money lender

3-Loan 2:

Credit cooperative

Government scheme

Bank loan

TOTAL FUNDING

2.7 Financial Plan

Organization and Staff

Organization of the business:

Staff requirements:

Position Tasks, Responsibilities and Qualifications Planned

organization chart

Business Operation and Costs

Staff costs:

Salary per month

Social security Total

Staff cost

Expected Revenues

Monthly Sales Plan: (12 Months)

All products, product range or services.

Expected Expenses

Monthly Operational Cost Plan: (12 Months) Planning is based on the monthly sales plan.

Profit Margin

The profit margin is a ratio of a company's profit (sales minus all expenses) divided by its revenue. The profit margin ratio compares profit to sales and tells you how well the company is handling its finances overall. It's always expressed as a percentage.

Monthly Estimation of Net Profit (Revenues - Expenses)

Cash Flow Plan : (12 Months)

Cash In Cash Out

Cash at the end of the month.

Opening Balance sheet

Assets

Total Liabilities and Owner's Equity

3 SYSTEM ANALYSIS

3.2 Introduction (Aim of the chapter)

3.3 System Methodology

3.4 System Requirements gathering methods

3.5 System Requirements

3.5.1 Functional requirements

3.5.2 Non-functional requirements

3.6 System Users

3.7 System Diagrams

3.7.1 Use case diagram

3.7.2 Activity diagram (For each usecase)

3.2 Introduction (Aim of the Chapter)

This section introduces the purpose of the chapter and briefly explains the topics that will be discussed, such as the system methodology, requirements gathering methods, system requirements, users, and system diagrams.

3.3 System Methodology

This section describes the development methodology used in the project, explaining the approach followed to design, develop, and implement the system (such as Agile, Waterfall, or other methodologies).

3.4 System Requirements Gathering Methods

This section explains the techniques used to collect and identify the system requirements from stakeholders or users, such as interviews, questionnaires, observation, or document analysis.

3.5 System Requirements

This section presents the overall requirements of the system, describing what the system should do and the conditions it must satisfy to meet the needs of users and stakeholders.

3.5.1 Functional Requirements

This section describes the specific functions and operations that the system must perform, including the services, tasks, and interactions available to users.

3.5.2 Non-Functional Requirements

This section describes the quality attributes and constraints of the system, such as performance, security, reliability, usability, and scalability.

3.6 System Users

This section identifies the different types of users who interact with the system and explains their roles, responsibilities, and permissions.

3.7 System Diagrams

This section presents visual diagrams that illustrate the structure and behavior of the system, such as use case diagrams and activity diagrams used to explain the system analysis.

Chapter Four

4 SYSTEM DESIGN

4.2 Introduction (Aim of the chapter)

4.3 Database structure ERD

4.4 Database Mapping

4.5 Class Diagram

4.6 Sequence Diagram

4.2 Introduction (Aim of the Chapter)

This section introduces the purpose of the chapter and provides an overview of the system design components discussed, including database design and system diagrams.

4.3 Database Structure (ERD)

This section presents the **Entity-Relationship Diagram (ERD)** that illustrates the database structure, including entities, attributes, and relationships between different data components in the system.

4.4 Database Mapping

This section explains the transformation of the ERD into relational database tables. It shows how entities, attributes, and relationships are mapped into tables, primary keys, and foreign keys.

4.5 Class Diagram

This section presents the class diagram that describes the structure of the system in terms of classes, attributes, methods, and the relationships between different classes.

4.6 Sequence Diagram

This section illustrates the sequence of interactions between system components or objects over time, showing how processes and operations are executed step by step.

Chapter Five

5 SYSTEM IMPLEMENTATION

5.2 Introduction (Aim of the chapter)

5.3 System Map

5.4 System user interface Screenshots

5.5 System source code screenshots

5.6 Database connection screenshots

5.2 Introduction (Aim of the Chapter)

This section introduces the purpose of the chapter and provides an overview of the system implementation, including the system structure, user interface, source code, and database connection.

5.3 System Map

This section presents a visual overview of the system structure, showing the main components, modules, or pages of the system and how they are connected.

5.4 System User Interface Screenshots

This section displays screenshots of the system's user interface to illustrate how users interact with the system and to demonstrate the main features and pages.

5.5 System Source Code Screenshots

This section provides screenshots of important parts of the system's source code to demonstrate how the system was implemented and to highlight key programming components.

5.6 Database Connection Screenshots

This section shows screenshots that demonstrate how the system connects to the database, including configuration settings or code used to establish the connection.

Chapter Six

6 TESTING METHODOLOGY

6.2 Introduction (Aim of the chapter)

6.3 Testing methodology

6.4 Test Cases

6.5 Login validation

6.6 Sign up validation

6.7 Test Core System features (main functions)

6.2 Introduction (Aim of the Chapter)

This section introduces the purpose of the chapter and provides an overview of the system testing process, including the testing methodology, test cases, and validation of the main system functions.

6.3 Testing Methodology

This section explains the approach used to test the system to ensure that it works correctly and meets the specified requirements.

6.4 Test Cases

This section presents detailed test cases that describe the testing scenarios, including the inputs, expected results, and actual results to verify that the system functions properly.

6.5 Login Validation

This section tests and verifies the login functionality to ensure that users can access the system securely using valid credentials and that incorrect inputs are handled properly.

6.6 Sign Up Validation

This section tests the user registration process to ensure that new users can create accounts successfully and that all input data is validated correctly.

6.7 Test Core System Features (Main Functions)

This section tests the main functionalities of the system to ensure that the core features operate correctly and meet the project requirements.

Chapter Seven

7 CONCLUSION AND FUTURE WORK

7.2 Introduction (Aim of the chapter)

7.3 Conclusion

- A summary of your key arguments and/or results.
- A short discussion of the implications of your research.
- Summarize and reflect on your research process
- Show what new knowledge you have contributed to your field.

7.4 Future Work

Make some recommendation for the future features that you intend to add to your project in the future.
